

## Washing instructions **COTTY**

**COTTY** is wash-fast, light-fast, and chlorine-fast. Please observe the following instructions of care.

### Washing

Although normal concentrations of chlorine and other optical brighteners do not affect colours, they still attack the thread fibre. Therefore we recommend using gentle mild washing agents for all the embroideries. With hand-wash possibly wash with much water.

Important is careful rinsing prior to wringing or spin-drying. Do not leave the washing lying around when it is wet. Both are especially important for embroideries that are washed for the first time.

### Dry cleaning – spot removal

**COTTY** can be dry cleaned.

Should the embroidery get into contact with spot removers, these must neither include bleaching agents nor decolorants. After removing spots, rinse the embroidery carefully.

### Ironing

All the embroideries shall be ironed on the reverse side or in-between two cloths.
